

# *Data analysis of elections*

Renio dos Santos Mendes

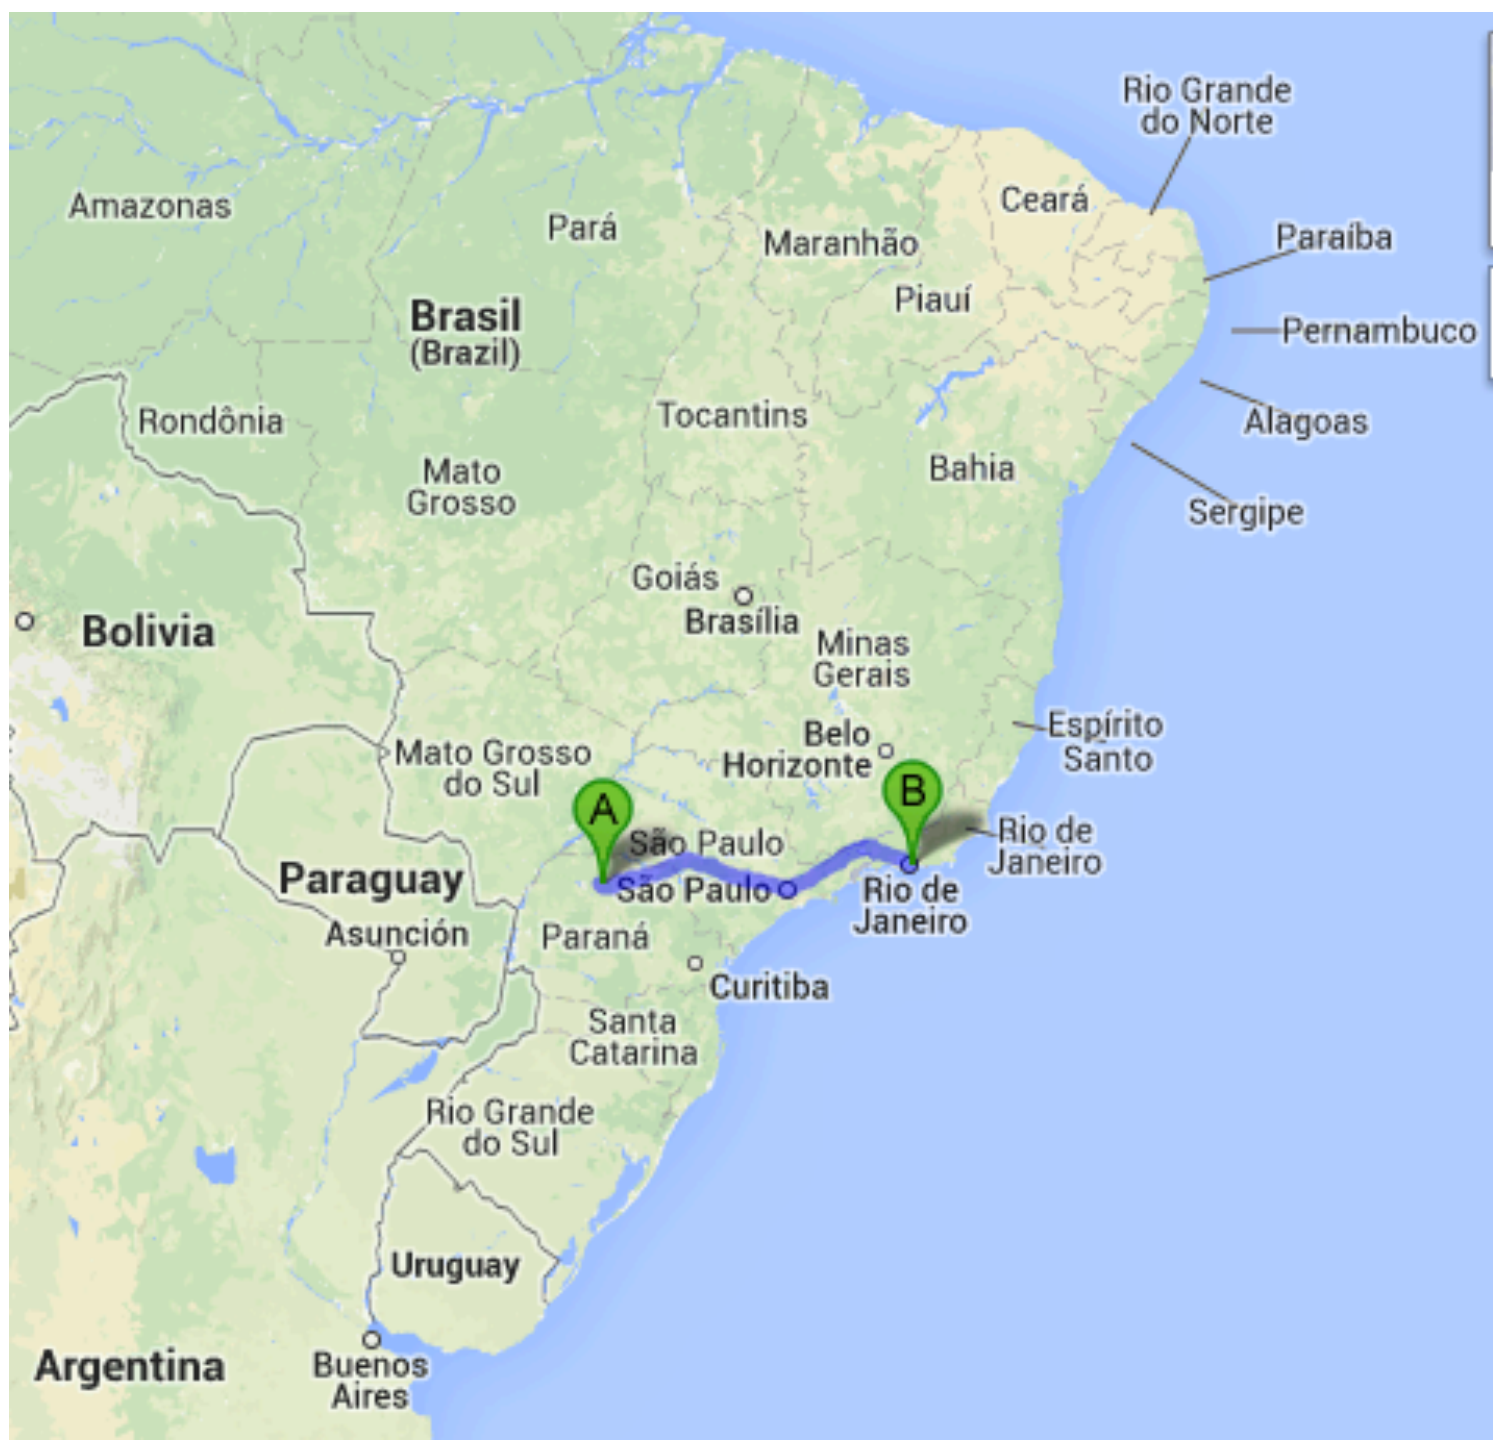

Universidade Estadual de Maringá

Complex Systems - Foundations and Applications

Rio de Janeiro

31 October 2013

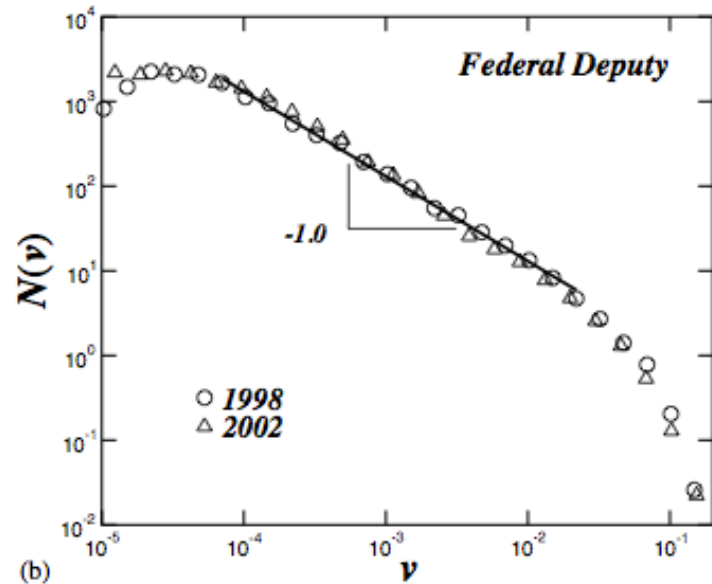

# *Outline*

- Vote distribution in proportional elections
- Simulation of vote distribution
- Scaling in proportional elections
- Turnout rates
- Choosing candidates to elections
- Occupation of political positions
- Conclusion

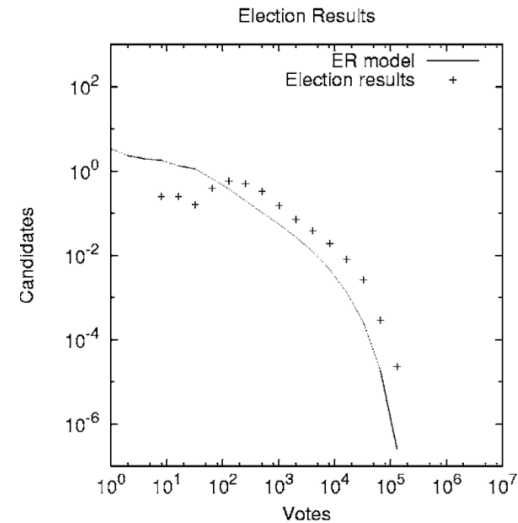

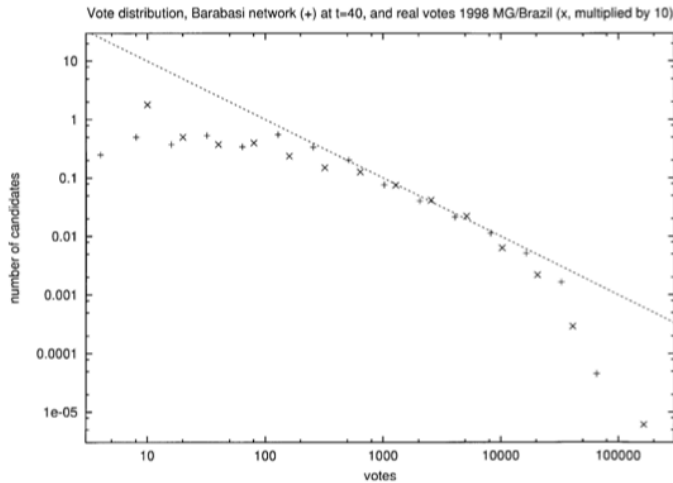

# Vote distribution in proportional elections I

Power law behavior with exponent  $-1$  in the central part.  
Brazilian elections.

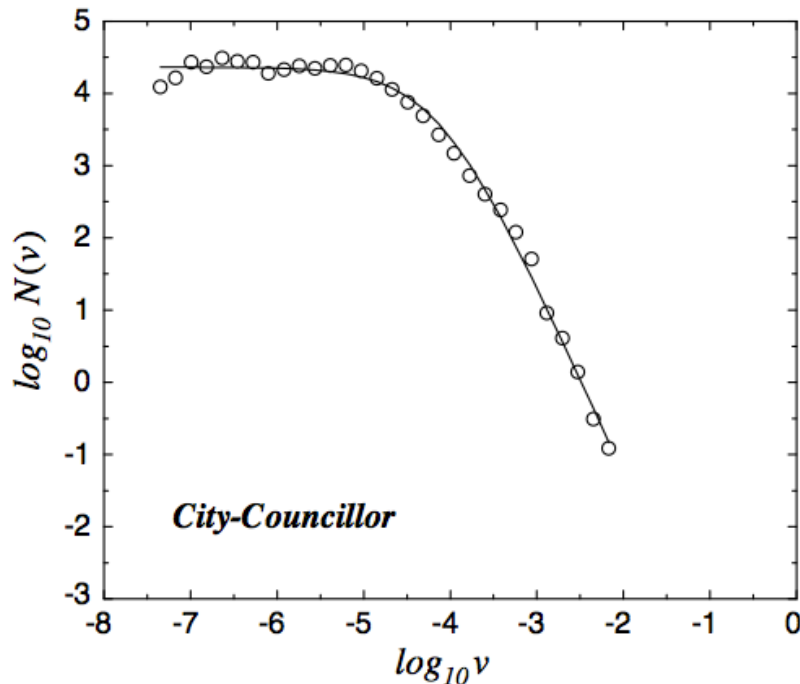

- R. N. Costa Filho, M. P. Almeida, J. S. Andrade, J. E. Moreira, *Scaling behavior in a proportional voting process*, Phys. Rev. E 60 (1999) 1067-1068.
- R. N. Costa Filho, M. P. Almeida, *Brazilian elections: voting for a scaling democracy*, Physica A 322 (2003) 698-700.

# Simulations

- 500000 nodes on a Brabási network, 1000 candidates, 40 steps. Minas Gerais data.
- Pseudo-fractal network (21,253,732 nodes and 1144 candidates).  
Minas Gerais and São Paulo data.
- Erdős Rényi network. São Paulo data.
- A. T. Bernardes, D. Stauffer, J. Kertész, *Election results and the Sznajd model on Barabási network*, Eur. Phys. J. B 25 (2002) 123-127.
- M. C. González, A. O. Sousa, H. J. Herrmann, *Opinion formation on a deterministic pseudo-fractal network*, Int. J. Mod. Phys. C 16 (2004) 45-57.
- G. Travieso, L. F. Costa, *Spread of opinions and proportional voting*, Phys. Rev. E 74 (2006) 036112.

# *Vote distribution in proportional elections II*

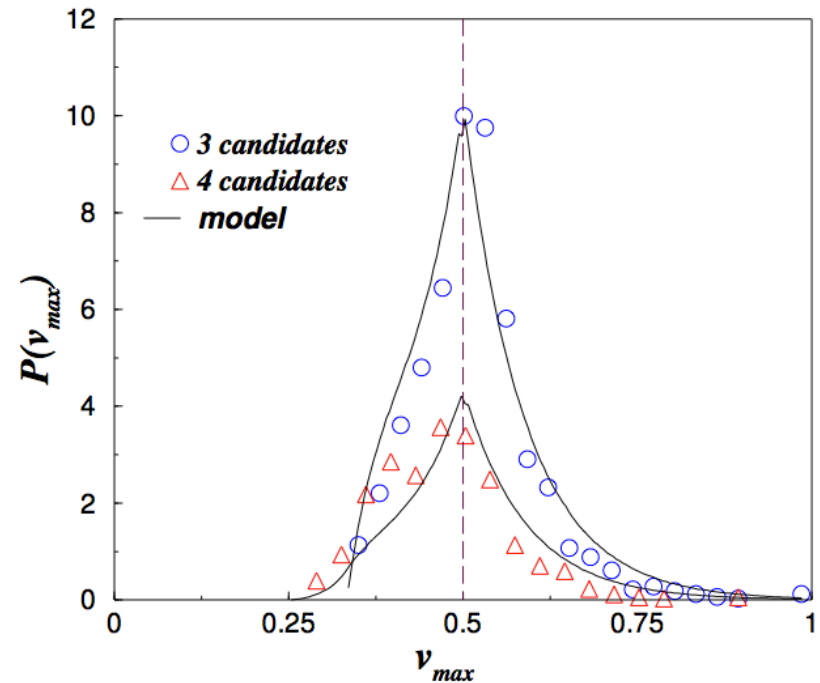

A q-exponential

A generalized q-exponential

- M. L. Lyra, U. M. S. Costa, R. N. Costa Filho, J. S. Andrade, *Generalized Zipf's law in proportional voting processes*, Europhys. Lett. 62 (2003) 131-137.

# Mayor elections I

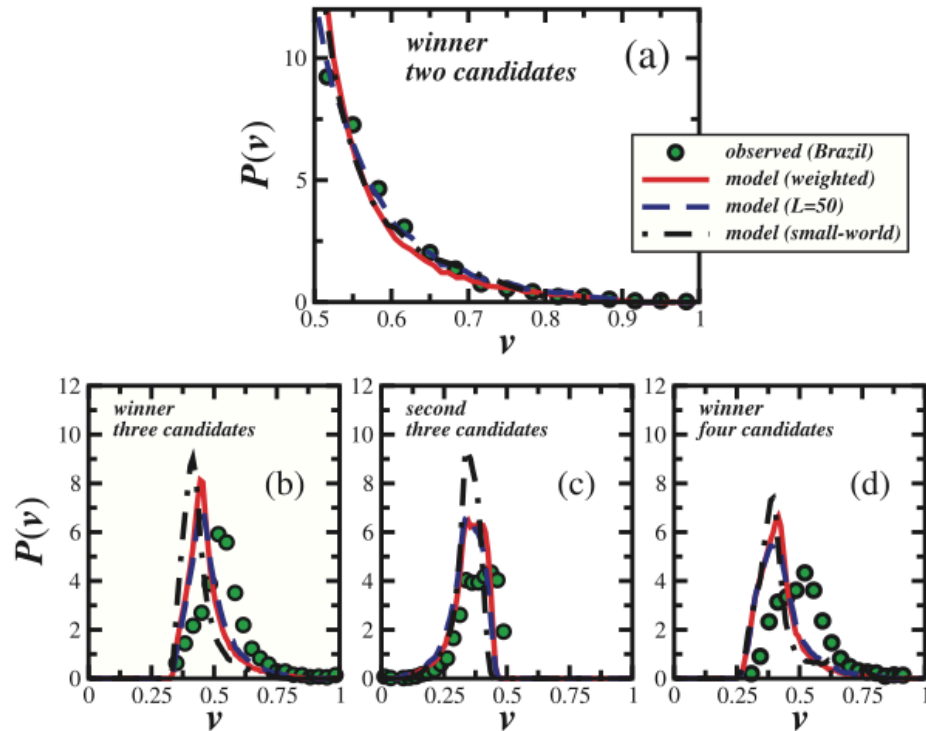

Histograms of voting fraction for mayor elections of Brazilian cities in 2004.

Continuous lines: a fragmentation model.

- L. E. Araripe, R. N. Costa Filho, H. J. Herrmann, J. S. Andrade, *Plurality voting: the statistical laws of democracy in Brazil*, Int. J. Mod. Phys. C 17 (2006) 1809-1813.

# Mayor elections II

Model (continuous lines):

$q$ -states (candidates) Potts model with an external field (polls impact).

- N. A. M. Araújo, J. S. Andrade, H. J. Herrmann, *Tactical voting in plurality elections*, *PLoS ONE* 5 (2010) e12446.

# Scaling in proportional elections

- $v \rightarrow$  number of votes of a candidate
- $Q \rightarrow$  number of candidates of a party
- $N \rightarrow$  total number of votes of a party

- S. Fortunado, C. Castellano, Scaling and universality in proportional elections, Phys. Rev. Lett. 99 (2007) 138701.

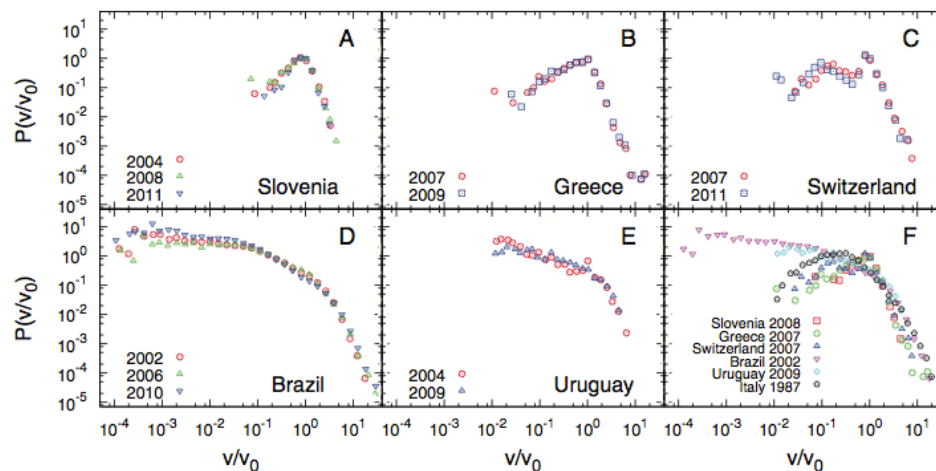

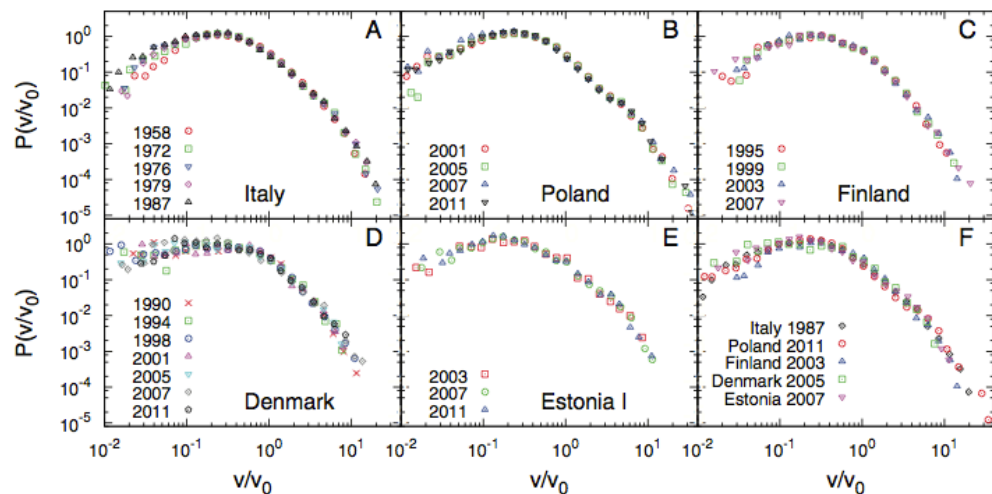

# Scaling in proportional elections

$$vQ/N = v/v_0$$

- L. E. Araripe, R. N. Costa Filho, *Role of parties in the vote distribution of proportional elections*, Physica A 388 (2009) 4167-4170.

# Scaling in proportional elections: general scenario

- A. Chatterjee, M. Mitrovic, S. Fortunato, *Universality in voting behavior: an empirical analysis*, Sci. Rep. 3 (2013) 1049.

# Turnout rates

Number of actual voters

→  $N_a$

Registered voters

→  $N$

Turnout rate

→  $p = N_a/N$

Logarithmic turnout rate

→  $\tau = \ln(p/(1-p))$

Spatial correlation

→  $C_T(r)$

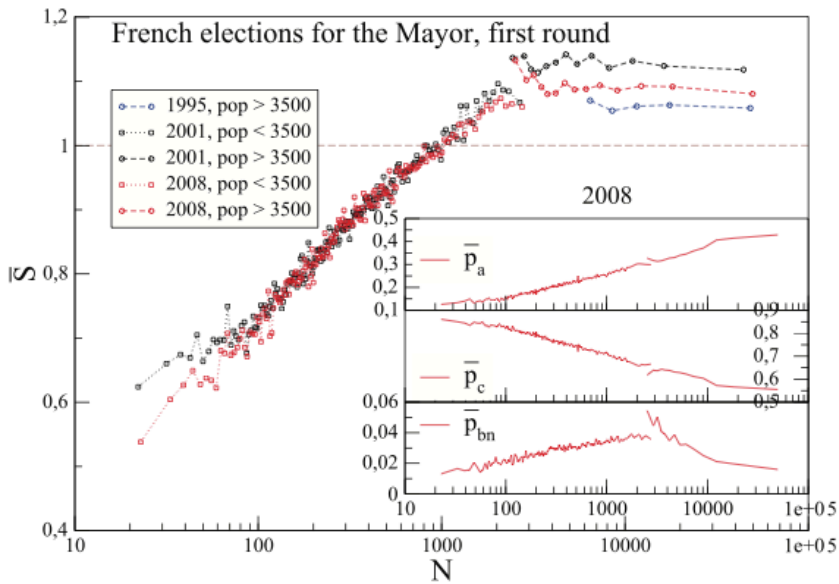

- C. Borghesi, J. P. Bouchaud, *Spatial correlations in vote statistics: a diffusive field model for decision-making*, Eur. Phys. J. B 75 (2010) 395-404.
- C. Borghesi, J.-C. Raynal, J.-P. Bouchaud, *Election turnout statistics in many countries: similarities, differences, and a diffusive field model for decision-making*, PLoS ONE 7 (2012) e36289.

# Turnout rate model

$$\frac{\partial \phi(\mathbf{R}, t)}{\partial t} = D \Delta \phi(\mathbf{R}, t) + \eta(\mathbf{R}, t).$$

$$C_\phi(r) = \frac{\langle \phi(r) \phi(0) \rangle}{\langle \phi(0)^2 \rangle} \approx -\Lambda^2 \ln \frac{r}{L}, \quad l_c \ll r \ll L.$$

# Involvement of municipalities

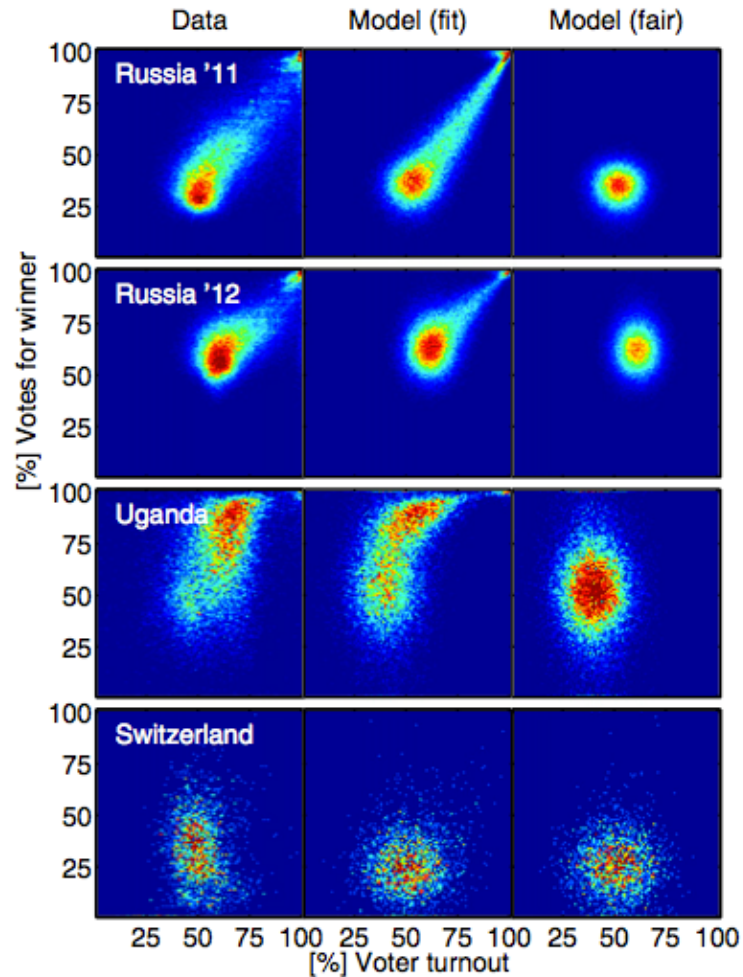

Number of abstentionists →  $N_a$   
 Votes in favor of candidates →  $N_c$   
 Blank and null votes →  $N_{bn}$

$$p_a = \frac{N_a}{N}, \quad p_c = \frac{N_c}{N}, \quad p_{bn} = \frac{N_{bn}}{N}$$

$$S(p_a, p_c, p_{bn}) = -p_a \log p_a - p_c \log p_c - p_{bn} \log p_{bn}$$

- C. Borghesi, J. Chiche, J.-P. Nadal, *Between order and disorder: a 'weak law' on recent electoral behavior among urban voters*, PLoS ONE 7 (2012) e39916.

# Election irregularities

- P. Klimek, Y. Yegorov, R. Hanel, S. Thurner, *Statistical detection of systematic election irregularities*, PNAS 109 (2012) 16469-16473.

# Choosing candidates for elections

Number of candidates for a city council

→  $n_c$

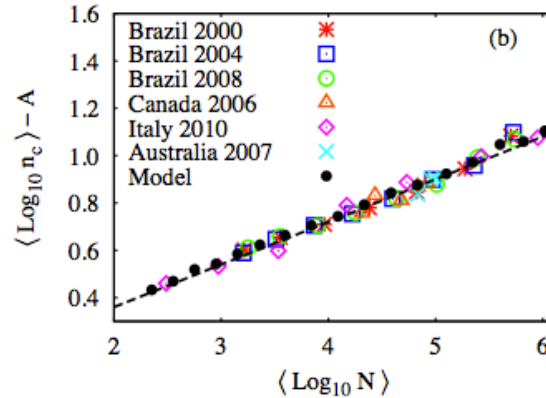

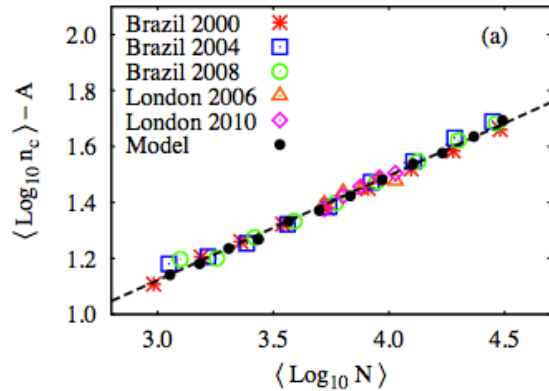

Number of voters

→  $N$

2008 Brazilian case  $\approx 5,500$  cities

- M. C. Mantovani, H. V. Ribeiro, M. V. Moro, S. Picoli Jr., R. S. Mendes, *Scaling laws and universality in the choice of election candidates*, Europhys. Lett. 96 (2011) 48001.

# Choosing candidates for elections

Model:  
multiplicative process

$$n_c = \mathcal{A} \zeta(N) N^\alpha$$

City council elections (multi-member) exponent  $\approx 0.36$

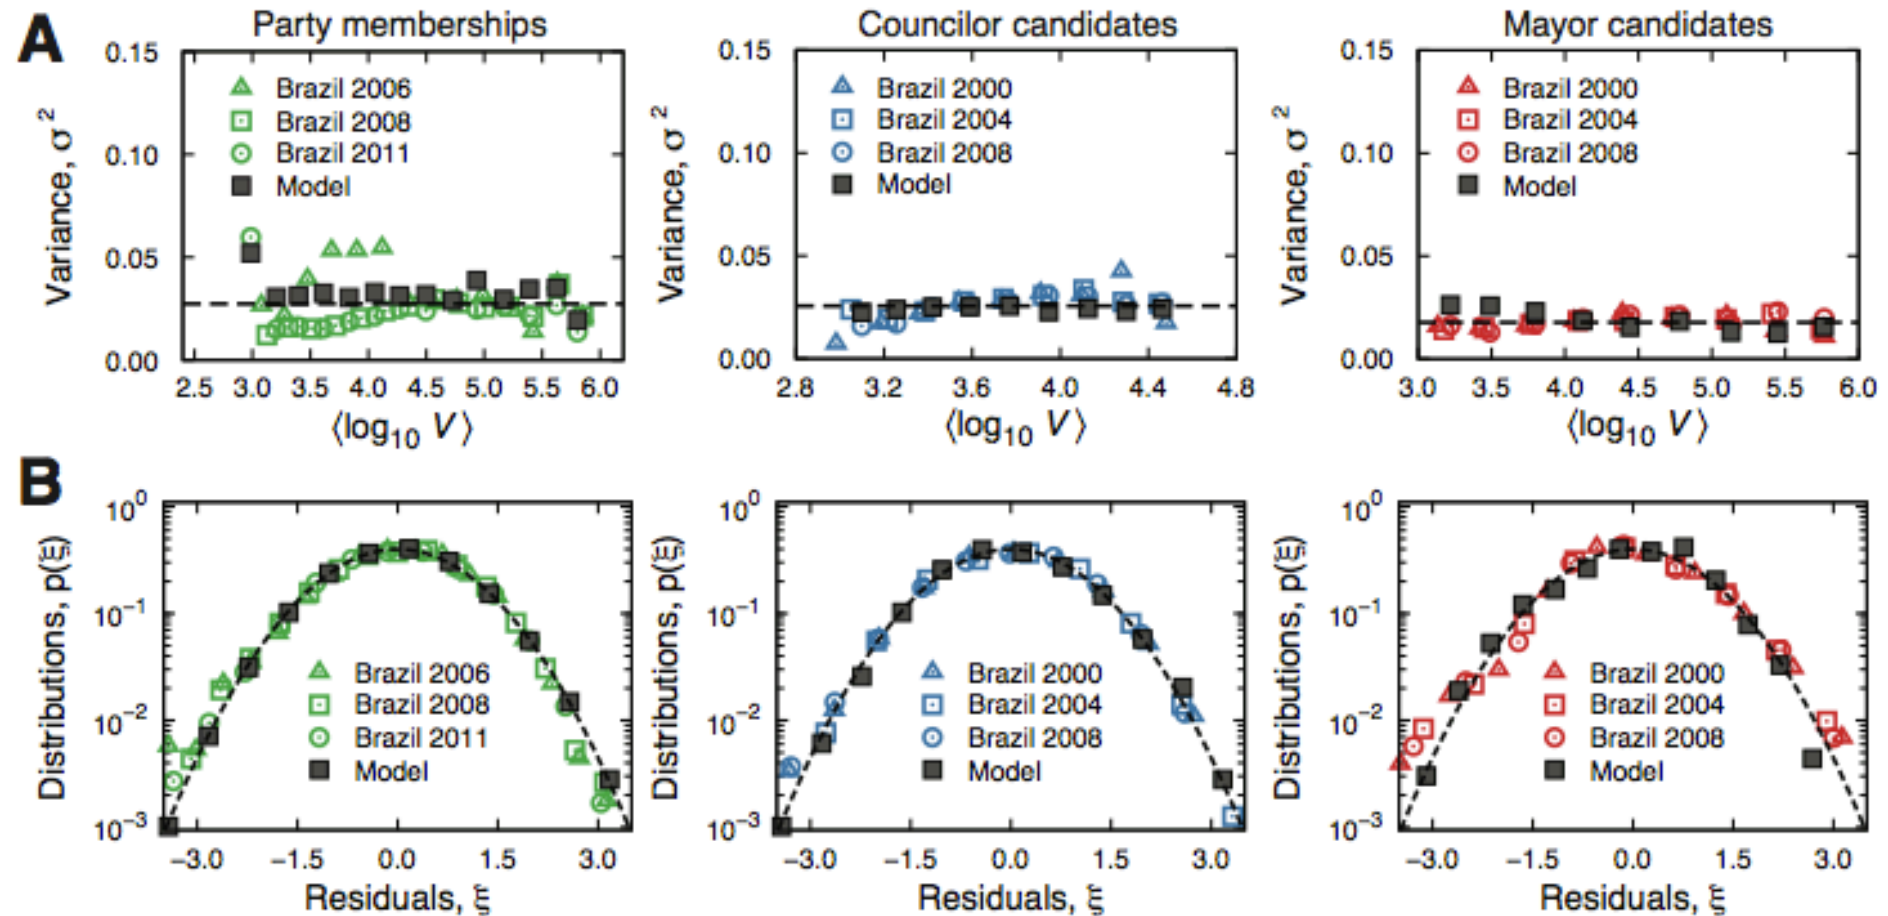

Mayor elections (single-member) exponent  $\approx 0.18$

# Role of the political position

- M. C. Mantovani, H. V. Ribeiro, E. K. Lenzi, S. Picoli Jr., R. S. Mendes, *Engagement in the electoral processes: scaling laws and the role of the political position*, Phys. Rev. E 88 (2013) 024802.

# Role of the political position

# Role of the political position

- Exponents decrease with the importance of the political position.
